

Ezra Piyachanokwong

AI-Driven Software QA Engineer

Bangkok, Thailand | ezrapiya.th@gmail.com | +66 91-009-9427
Portfolio: with-ezra.com | LinkedIn: linkedin.com/in/ezra-piyachanokwong

PROFESSIONAL SUMMARY

Software Quality Assurance Engineer with 3+ years of experience in web application testing, API testing, automated E2E testing, database validation, and CI/CD-based quality workflows. Hands-on experience working in AI-assisted development environments, including collaboration with Claude Code (Claude Opus 4.8) workflows, and applying AI-assisted testing, prompt engineering, n8n automation, and RAG-based workflows to improve requirement analysis, test data generation, QA documentation, and regression testing efficiency. Currently self-studying AI Engineering through Udemy to strengthen practical knowledge of LLM workflows, AI automation, and agentic QA use cases. Experienced with Playwright, Robot Framework, Postman/Newman, Pytest, SQL, PostgreSQL, MySQL, GitHub Actions, Docker, Jira, ClickUp, Gemini LLM, Claude Code, and n8n.

CORE SKILLS

AI & QA Productivity: Claude Code (Claude Opus 4.8) collaboration, AI-assisted testing, prompt engineering for QA, AI Engineering self-study, n8n automation, Gemini LLM, Agentic RAG, PostgreSQL vector database

Test Automation: Playwright, Robot Framework, Postman, Newman CLI, Pytest, JavaScript, TypeScript, Python, automated E2E testing

Testing Practices: Web application testing, API testing, E2E testing, regression testing, functional testing, black-box testing, test scenario design, defect reporting

Data & Backend Validation: SQL, PostgreSQL, MySQL, data validation, data integrity checks, API-to-database verification

Tools & Delivery: Git, GitHub Actions, Docker, Jira, ClickUp, CI/CD quality workflow, cross-functional defect triage

SELECTED AI & AUTOMATION PROJECTS

AI-Powered Test Data Generation Workflow | Gemini LLM + n8n + Agentic RAG

- Designed an AI-assisted workflow to transform PDF, Excel, CSV, and TXT inputs into QA-ready test data for API and regression testing.
- Implemented RAG with PostgreSQL as a vector database to support document ingestion, querying, and LLM-based test data enrichment.

API Test Automation Pipeline | Postman + Newman + GitHub Actions

- Built automated API regression workflows using Postman Collections, Newman CLI, and GitHub Actions with scheduled recurring execution.
- Validated API health, regression scenarios, and release readiness through structured response and business-rule assertions.

Reusable API Test Framework | Python + Pytest

- Designed a modular API testing framework focused on maintainability, reusable test structure, and report visibility. GitHub: github.com/ezra31448/PyTestify

PROFESSIONAL EXPERIENCE

Software Tester | Health Up | May 2026 - Present

- Test web applications across end-to-end user flows, UI behavior, validation rules, regression risks, and release-critical scenarios.
- Develop automated E2E tests for core web application workflows to improve regression coverage and reduce repetitive manual validation.
- Translate product behavior, defects, and regression risks into clear feedback for AI-assisted development cycles and reproducible QA evidence.
- Work with a Claude Code-based AI coding agent that monitors ClickUp tasks and supports implementation; provide QA-driven bug cards, acceptance criteria, and correction feedback.
- Validate AI-generated implementation for the Upload Excel project, covering business flow, UI behavior, file input handling, data accuracy, edge cases, and regression readiness.

QA Engineer | CP Aextra (Contract) | Jan 2026 - Apr 2026

- Designed and executed API test scenarios covering functional flows, validation rules, edge cases, and regression risks.
- Performed PostgreSQL data validation to confirm backend data accuracy, API response consistency, and business rule outcomes.
- Executed E2E regression testing with Robot Framework and documented reproducible defects with clear evidence.

QA Engineer | Ascend nano | Sep 2025 - Nov 2025

- Implemented automated API tests with Robot Framework and scheduled execution through GitHub Actions.
- Created API scenarios covering response validation, business logic, negative cases, and database consistency checks.
- Validated backend data using MySQL and collaborated with engineering teams to resolve defects.

QA Engineer | Central Food Wholesale | Mar 2024 - Aug 2025

- Tested web and API features across product, pricing, order, and badge management workflows.
- Built automated API regression pipelines using Postman Collections, Newman CLI, and GitHub Actions.
- Developed Playwright E2E tests for key UI workflows, improving regression coverage and reducing repetitive manual checks.
- Validated backend data using PostgreSQL and SQL to ensure data integrity across API responses and business processes.
- Built an AI-powered test data generation workflow with n8n, Gemini LLM, and RAG to process unstructured files into QA datasets.

QA Engineer | Principal Healthcare | Feb 2023 - Mar 2024

- Designed and executed test plans and test cases to validate data accuracy across multiple systems and databases.
- Used SQL queries to verify multi-system data consistency and support issue investigation.
- Integrated test execution outputs with QA reporting workflows and tracked defects in Jira.

QA Engineer & Junior Developer | Chococard Enterprise | Jun 2022 - Feb 2023

- Performed black-box, GUI, functional, and regression testing for web applications.
- Created manual test plans, executed frontend/backend validation scenarios, and supported defect reproduction with developers.

EDUCATION & PROFESSIONAL DEVELOPMENT

Bachelor of Science (B.Sc.), Digital Technology for Design | Silpakorn University | Graduated: 2018

AI Engineering Self-Study | Udemy | 2026 - Present | Focus: practical LLM workflows, AI automation, prompt engineering, and agentic QA use cases
